Week 10 Q 1-5

- What is your project about?
  - *It is about rise in singlehood in Singapore*

- What is the data you plan to use?
  - https://tablebuilder.singstat.gov.sg/table/TS/M810581 (shows the rise, categorized by the age and gender)
  - https://www.population.gov.sg/media-centre/press-releases/key-findings-marriage-and-parenthood-survey-2021/ (show why singles can't find love, and how people who did find their partner managed to find them)

- What is the question you plan to answer?
  - Which age group is contributing to this rise?
  - Why is it that there is an increasing number of people who are single?
  - Is love dying? What might be the cause?

- Why is this an important question?
  - Understanding the reasons for the rising levels of singlehood in Singapore is crucial because it could have potential negative consequences for society, the economy, and individuals if left unaddressed. The trend towards singlehood may also imply a trend toward late marriage and non-marriage, both detrimental to Singapore society as the government is pushing for more married couples.
  - From a government perspective, rise in singlehood may not be the best for the stability and wellbeing of the society as a whole. Families are commonly viewed as a unit of society.
  - From the point of view of a young Singaporean (that is single), this article might help them feel less alone and also help them understand what could be the cause of their singlehood and how they can take action to increase their opportunities of meeting their significant other.

- Which rows and columns of the dataset do you plan to use, to answer this question?
  - From DOS data
  - For the line chart looking at the years (2012 to 2022), splitting by year
  - Using that to calculate the percentage increase in singlehood
  - Looking at the proportion of singles by gender, and also by age group
  - From Marriage and Parenthood Survey
  - Mainly taking the charts and values from ANNEX B
  - Reasons for not dating
  - How they wish to meet their potential partners
